"This book highlights and discusses the underlying QoS issues that arise in the delivery of real-time multimedia services over wireless networks"--Provided by publisher. Patrons, Authors and Workshops invokes a cross-disciplinary approach to the study of late medieval books and book production in Paris, from the troubled years of the early fifteenth century onwards. It shows the extent to which such activity was able to flourish even against the backdrop of the endemic struggle between Burgundians and Armagnacs, or the subsequent English invasion which led to Agincourt and the regency of Bedford. Extensive coverage is given to the key role played by the libraire, to the author as scribe or copyist (Christine de Pisan, Jean Lebegue), and also to the development of commercial production under figures such as Jean Trepperel. A section on bibliophiles and their various commissions leads into a group of essays that focus on particular texts and authors, whilst a further section concentrates on what we can discover about the role of the scribe. The volume concludes with four essays offering insights into the work of particular artists and illuminators. The authors include scholars from the UK, France, Greece, Germany, Italy, Belgium, the Netherlands and the USA. Godfried Croenen is Lecturer in French at the

University of Liverpool. Peter Ainsworth is Professor of French at the University of Sheffield. This book constitutes thoroughly refereed post-conference proceedings of the workshops of the 18th International Conference on Parallel Computing, Euro-Par 2012, held in Rhodes Islands, Greece, in August 2012. The papers of these 10 workshops BDMC, CGWS, HeteroPar, HiBB, OMHI, Paraphrase, PROPER, UCHPC, VHPC focus on promotion and advancement of all aspects of parallel and distributed computing. Within the academic realm, doctoral research plays a vital role in the advancement of knowledge. In areas ranging from strategy and international business to marketing, finance and operations management, the contributions in this volume represent the very best in doctoral research in the field of management worldwide. This first book in the Advances in Doctoral Research in Management series includes both doctoral research papers and a section on doctoral research notes consisting of shorter versions of extended monographs. There is also a section on research methodology papers that builds awareness and provides applications of new methodological concepts, techniques and tools. Contents: Knowledge Transfer: A Review to Explore Conceptual Foundations and Research Agenda (S M Jasimuddin) Negotiating Incommensurability in Marketing Theory (M Tadajewski et al.) Explaining Ecological Product Purchase Using Consumers' Psychographic Characteristics (E Fraj et al.) Extensions of Logistic Growth Model for the Forecasting of Product Life Cycle Segments (M Sokele & V Hudek) Defensive Strategies and Consumers' Bounded Rationality: An Artificial Market Simulation (J A Mazanec et al.) A User Evaluation of Web Recommender Systems (U

Bauernfeind)The Determinants of Relationship Marketing: An Application to Thermal Spas (J Antunes)Supermarket Site Assessment and the Importance of Spatial Analysis Data (A B Mendes et al.)A Framework for Corporate Crisis Management: Applications to SMEs in Australia (M Aba-Bulgu & S M N Islam)Option Games, Asymmetric Information and Merger Announcement Returns (H Pan & X Xia)Analysing Data Using GLM Models (G D Hutcheson)The Issue of Missing Values, Their Presence and Management: A Relevant Demonstration of Data Analysis in Marketing Using CaRBS (M J Beynon)

Readership: Doctoral students, researchers, and academics in the field of management. Suitable as supplementary reading in doctoral programs. Keywords:Doctoral;Research;Management Methodology;Data;Analysis;Paradigm;Modeling;International

Key Features:A unique academic refereed outlet on doctoral research in the field of managementA key reference in the libraries of all doctoral programs

In the last thirty years, Magnetic Resonance has generated a wide revolution in biomedical research and in medical imaging in general. More recently, the "in vivo" studies of the human brain were extended by new original ways to the dynamic study of function and metabolism of the human brain. The enormous interest in expanding the investigation of the brain is emphasizing the search for new NMR methods capable of extracting information of so-far obscure aspects of the brain function. In fact, many quantitative approaches have been proposed in order to complement the information obtained by functional MRI, and several multimodal and multiparametric approaches have been developed to exploit the information, either functional or structural, made available by the flexible contrast generation

typical of MRI, and to combine it with complementary information. The XII workshop of the International School on Magnetic Resonance and Brain Function, held in Erice between 17 April and 6 May, 2016, was specially devoted to novel approaches aimed at better structural characterization of brain diseases, and at investigating frontiers MRI approaches to better understand the brain function. The papers included in this eBook offer a broad overview of the subjects covered during the Workshop, including applications of multiparametric MRI to neurological diseases, multimodal combination of MRI with electrophysiology, advanced methods for the investigation of brain networks and of brain physiology, and perspectives towards brain state reading.
