[IBM Power E1080 Technical Overview and Introduction](#) Nov 04 2021 This IBM® Redpaper® publication provides a broad understanding of a new architecture of the IBM Power® E1080 (also known as the Power E1080) server that supports IBM AIX®, IBM i, and selected distributions of Linux operating systems. The objective of this paper is to introduce the Power E1080, the most powerful and scalable server of the IBM Power portfolio, and its offerings and relevant functions: Designed to support up to four system nodes and up to 240 IBM Power10™ processor cores The Power E1080 can be initially ordered with a single system node or two system nodes configuration, which provides up to 60 Power10 processor cores with a single node configuration or up to 120 Power10 processor cores with a two system nodes configuration. More support for a three or four system nodes configuration is to be added on December 10, 2021, which provides support for up to 240 Power10 processor cores with a full combined four system nodes server. Designed to supports up to 64 TB memory The Power E1080 can be initially ordered with the total memory RAM capacity up to 8 TB. More support is to be added on December 10, 2021 to support up to 64 TB in a full combined four system nodes server. Designed to support up to 32 Peripheral Component Interconnect® (PCIe) Gen 5 slots in a full combined four system

nodes server and up to 192 PCIe Gen 3 slots with expansion I/O drawers The Power E1080 supports initially a maximum of two system nodes; therefore, up to 16 PCIe Gen 5 slots, and up to 96 PCIe Gen 3 slots with expansion I/O drawer. More support is to be added on December 10, 2021, to support up to 192 PCIe Gen 3 slots with expansion I/O drawers. Up to over 4,000 directly attached serial-attached SCSI (SAS) disks or solid-state drives (SSDs) Up to 1,000 virtual machines (VMs) with logical partitions (LPARs) per system System control unit, providing redundant system master Flexible Service Processor (FSP) Supports IBM Power System Private Cloud Solution with Dynamic Capacity This publication is for professionals who want to acquire a better understanding of Power servers. The intended audience includes the following roles: Customers Sales and marketing professionals Technical support professionals IBM Business Partners Independent software vendors (ISVs) This paper does not replace the current marketing materials and configuration tools. It is intended as an extra source of information that, together with existing sources, can be used to enhance your knowledge of IBM server solutions.

**The Will in Ethics** May 30 2021 Excerpt from The Will in Ethics It is for this reason the author essays this shop window word to briefly exhibit his wares and in a few sentences express the thought which he has attempted to elaborate more fully and at length in his book. The particular will and the Universal will and their mutual relations to each other is the most absorbing and important theme that the intellect of man can dwell upon. In it are hidden the mysteries of life, good and evil, happiness and misery. Once understand the true relations of the particular will to the Universal, and you hold in your hand the key to all things. This is the theme of the book, in which we seek to discover first what the will is, how we may know the Universal will as distinguished from the particular will, and what the rule or canon of their relation to each other; for the Universal will is and must be good altogether, and whether a particular will be good must depend upon its relation to the Universal will, upon whether it observes the rule of their relation. A good will must be a will harmonious, at one, with the Universal will; and this harmony of the particular will with the Universal will has two aspects, one the internal side of feeling, the condition of the soul; the other the external side of conduct, the expression of that feeling in outward acts. **IBM Power System E950: Technical Overview and Introduction** Apr 16 2020 This IBM® Redpaper™ publication gives a broad understanding of a new architecture of the IBM Power System E950 (9040-MR9) server that supports IBM AIX®, and Linux operating systems. The objective of this paper is to introduce the major innovative Power E950 offerings and relevant functions: The IBM POWER9™ processor, which is available at frequencies of 2.8 - 3.4 GHz. Significantly strengthened cores and larger caches. Supports up to 16 TB of memory, which is four times more than the IBM POWER8® processor-based IBM Power System E850 server. Integrated I/O subsystem and hot-pluggable Peripheral Component Interconnect Express (PCIe) Gen4 slots, which have double the bandwidth of Gen3 I/O slots. Supports EXP12SX and ESP24SX external disk drawers, which have 12 Gb Serial Attached SCSI (SAS) interfaces and support Active Optical Cables (AOCs) for greater distances and less cable bulk. New IBM EnergyScale™ technology offers new variable processor frequency modes that provide a significant performance boost beyond the static nominal frequency. This publication is for professionals who want to acquire a better understanding of IBM Power Systems™ products. The intended audience includes the following roles: Clients Sales and marketing professionals Technical support professionals IBM Business Partners Independent software vendors (ISVs) This paper expands the current set of Power Systems documentation by providing a desktop reference that offers a detailed technical description of the Power E950 server. This paper does not replace the current marketing materials and configuration tools. It is intended as an extra source of information that, together with existing sources, can be used to enhance your knowledge of IBM server solutions.

**XIV Storage System Product Guide** Feb 07 2022 The IBM XIV Storage System is a high-end flash optimized, fully scalable enterprise disk storage system that is based on a grid of standard hardware components. The architecture of the system is designed to deliver out-of-the box performance and ease of management while harnessing the high capacity and cost benefits of serial-attached SCSI (SAS) drives. The XIV Gen3 systems (and the Model 314 in particular) offer powerful real-time compression that is based on the IBM Random Access Compression Engine (RACE) technology. This IBM Redbooks Product Guide offers a brief overview of the IBM XIV Gen3 Storage System hardware and software features.

AIA Guide to New York City Feb 24 2021 Since the AIA Guide to New York City was first published in 1967, it has been recognized as the ultimate guide to the metropolis's buildings, in all five boroughs -- Manhattan, Brooklyn, Queens, the Bronx, and Staten Island -- from nineteenth-century brownstones and tenements to modern high-rise apartments and museums. The latest edition of this urban classic takes a fresh look at the architectural treasures that define New York -- from its most characteristic landmarks to its less famous local favorites. To prepare this edition -- the first revision since 1987 -- Norval White has visited and revisited more than 5,000 buildings, making this by far the most complete guide of its kind. This generously illustrated handbook presents the structures of the New York City--from the magnificent to the obscure -- in over 3,000 new photographs, more than 130 new maps, and hundreds of revised and new entries. Beyond the skyscrapers and historical buildings, the guide also leads the way to the city's bridges, parks, and public monuments. From the tip of the Empire State Building to the brownstones in Brooklyn, the AIA Guide to New York City reveals how the city's spirit, fortitude, and character are captured and expressed in its architecture. Thoughtful and humorous descriptions include fascinating bits of local information that bring the city's history to life, telling the stories behind the bricks and mortar. Together, the maps, photographs, and expert critiques invite you on a special grand tour of the city at your own pace. This guide is a definitive record of New York's architectural heritage and provides a compact, authoritative directory for lovers of New York City all over the world. Its portability and encyclopedic quality make it an ideal traveling companion for any walker in the city. For the sightseer, the architect, or anyone on a casual stroll, the AIA Guide to New York City is the book to grab on your way out the door.

**The obligate intracellular lifestyle** Sep 21 2020 Bacterial pathogens whose development is restricted to the interior of eukaryotic cells encounter a unique set of hurdles to be overcome to enable growth. This issue is dedicated to the examination of the unique infection biology associated with this obligate intracellular existence. Distinct approaches to obligate intracellular parasitism will be covered by considering a range of molecular, cellular, and immunological mechanisms governing the overall success of pathogens including Chlamydia, Coxiella, Rickettsia, and Ehrlichia. The overall goal is to provide insight into both microbial and host mechanisms that enable colonization of a specialized intracellular niche. Bacterial pathogens whose development is restricted to the interior of eukaryotic cells encounter a unique set of hurdles to be overcome to enable growth. This issue is dedicated to the examination of the unique infection biology associated with this obligate intracellular existence. Distinct approaches to obligate intracellular parasitism will be covered by considering a range of molecular, cellular, and immunological mechanisms governing the overall success of pathogens including Chlamydia, Coxiella, Rickettsia, and Ehrlichia. The overall goal is to provide insight into both microbial and host mechanisms that enable colonization of a specialized intracellular niche.

**IBM Power System E980: Technical Overview and Introduction** Mar 16 2020 This IBM® Redpaper™ publication provides a broad understanding of a new architecture of the IBM Power System E980 (9080-M9S) server that supports IBM AIX®, IBM i, and Linux operating systems (OSes). The objective of this paper is to introduce the major innovative Power E980 offerings and relevant functions: The IBM POWER9™ processor, which is available at frequencies of 3.55 - 4.0 GHz. Significantly strengthened cores and larger caches. Supports up to 64 TB memory. Integrated I/O subsystem and hot-pluggable Peripheral Component Interconnect Express (PCIe) Gen4 slots, double the bandwidth of Gen3 I/O slots. Supports EXP12SX and ESP24SX external disk drawers, which have 12 Gb SAS interfaces and double the existing EXP24S drawer bandwidth. New IBM EnergyScale™ technology offers new variable processor frequency modes that provide a significant performance boost beyond the static nominal frequency. This publication is for professionals who want to acquire a better understanding of IBM Power Systems™ products. The intended audience includes the following roles: Clients Sales and marketing professionals Technical support professionals IBM Business Partners Independent software vendors (ISVs) This paper expands the current set of IBM Power Systems documentation by providing a desktop reference that offers a detailed technical description of the Power E980 server. This paper does not replace the current marketing materials and configuration tools. It is intended as an extra source of information that, together with existing sources, can be used to enhance your knowledge of IBM server solutions.
