Video has been very accessible to anyone with internet access, both to watch and to produce. While the technology is trending towards higher quality video on a professional level ,but with new enhancement , its ease of use has made it possible for anyone to hop onto their laptop and create their own video in under an hour The global live video streaming market is estimated to reach \$128 billion by 2026 and is one of the most valuable vehicles for marketers and brand advertising. Live streaming on social media is a relatively new phenomenon but more and more brands are adapting their social media strategies and influencer marketing strategies. Many Online Marketers are doing a crossover to social live video streaming and the trend is catching steam. Live video streaming differs from video content in that video content is recorded and accessed directly by the user. It takes the form of a broadcast in which the creator videos be transferred simultaneously to several users. A live video stream transmits the video in real time over the Internet. You don't need to be 'sold' on the reasons why you need a video marketing strategy, but let's be real, it feels daunting to even start. Creating video content sounds simple enough on paper but when it comes down to actually whipping out your iPhone and going Live . Where do you even start? Yes, it

can be intimidating thinking of yourself as the star of your videos; however, is there a better way to reach your ideal audience and showcase your coaching style AND expertise all at the same time? Remember, don't overthink this process. You don't need a fully equipped studio, nor do you need a hair and makeup team. Everyday people film millions of videos by simply hitting the Record button on their smart phones. Give it a try...I bet you'll be surprised at how easy the whole process is. With a well crafted workbook as your guidance, this book will guide readers to explore with the type of content they wish to record and publish, get some decent feedback or measure on analytics about what types of video perform best for you. Are you ready to get started? Are you someone who writes a lot? If so, you probably faced the issue of eye fatigue after a long time working at the laptop. Or you struggled with the slow startup, uncomfortable keyboard, or noisy cooling fan of your laptop. In addition, you probably do not work all the time at your desk but want to use your laptop on the go. To overcome all those issues and meet other specific requirements of persons writing a lot, a thoughtful selection of a laptop or tablet is necessary. It turns out that choosing the right laptop for a writer becomes quite hard when considering different requirements at the same time. In this guide, I help you to cope with that issue. I provide numerous advises on how to choose the best laptop or tablet for writing. All recommendations given in this book have been developed over many years of tests and trials. As a Ph.D., computer scientist, software developer, and a writer, I personally checked a number of laptops and tablets. Frankly, I am a passionate user of them. In contrast to numerous advice available on the Web, in this guide, I accurately justify all my recommendations. Thanks to those justifications, you will be able to evaluate by yourself how the actual conditions in which you work affect technical properties that your laptop or tablet should possess. Thus, you will be able to choose the best laptop or tablet for you. I also assess in this guide the impact of different technical properties on the price of laptops and tablets. Using that information, it will be easier for you to decide to which particular property you are sticking to, and which you are ready to give up, due to the increased price of the device. You may have your own idea about a laptop or tablet most suitable for writing. In spite of that, I strongly recommend you to confront your expectations with mine. In this guide, I indicate numerous specific requirements you might have not considered yet. In addition, it is always worth it to verify or supplement your preferences before making a final decision to buy an often expensive device. Let me underline that in this guide, I do not use any brand names, names of laptops, tablets or companies producing them. Instead, I provide specific technical properties which the laptop or tablet suitable for writing should possess. The chapters of this guide are ordered in accordance with the priorities, which in my opinion should be given to individual properties of the laptop or tablet suitable for writers. In this way, while reading the following chapters, you will be able to gradually precise your requirements regarding screen type and size, type of the processor, disk, keyboard and other. The conclusion coming from all given advices are two recommended specifications: one for the laptop and second for the tablet. Both specifications which I present in the last chapter of this guide should meet the writers' expectations. If you decide to buy both a laptop and a tablet, the provided specifications will complement each other. This new edition is sure to help consumers select the right electronics product for their needs. Experts provide hundreds of smart ways to save money and find the best values in computers, plasma televisions, cell phones and service, cameras, DVD players, and more.
